
UNITED STATES SUMMARY

MAP OF THE UNITED STATES SHOWING POPULATION PER SQUARE MILE BY COUNTIES: 1940

UNITED STATES SUMMARY

NUMBER OF INHABITANTS

INTRODUCTION

This section summarizes the statistics relating to the number of inhabitants of the United States as returned in the 1940 census, presenting the total population of the various areas, without classification by race, sex, age, or any other characteristics, such classification being reserved for other volumes of the census reports. The population is shown for States, for cities and other urban places arranged in groups according to size, for metropolitan districts, and for incorporated places having from 1,000 to 2,500 inhabitants. Comparative figures are presented for the States and for cities of 100,000 or more for all censuses, beginning with the first in which the area was separately enumerated. For smaller incorporated places, and metropolitan districts, comparative figures are given for at least one earlier census wherever available. The population of the minor civil divisions (townships, etc.), of the counties in the several States, of incorporated places having fewer than 1,000 inhabitants, of wards of incorporated places of 5,000 or more inhabitants, and of census tracts, is given in the sections relating to the various States.

Population data in other census reports.—Data on the basic characteristics of the population, including urban, rural-nonfarm and rural-farm residence, sex, age, race, nativity, citizenship, country of birth, school attendance, highest grade of school completed, employment status, class of worker, occupation, and industry are presented in the Second Series of Population Bulletins. More detailed statistics on the labor force are shown in the Third Series of Population Bulletins which present data on employment status, occupation, and industry in combination with age, race, and other characteristics, as well as data on wage or salary income in 1939, hours worked in the census week, months worked in 1939, and duration of unemployment. A continuation of the statistics on the general characteristics of the population, begun in the Second Series, is presented in the Fourth Series of Population Bulletins, which include additional data on age, citizenship, school attendance, and highest grade of school completed, together with statistics on marital status and relationship to head of household. Statistics on internal migration and families, as well as detailed tabulations of sample data on the characteristics of the labor force and of the general population, will be presented in subsequent series of bulletins.

Unincorporated places.—The Census Bureau often receives requests for the population of villages or small towns that are not incorporated and therefore have no legally established boundaries. The publication of official population figures is necessarily limited to those

places that have definite and well recognized boundaries—that is, to places incorporated as cities, boroughs, towns, or villages. Informal population counts are sometimes provided, however, for unincorporated places, where the enumerators have indicated the beginning and the ending of these places on their schedules. Record is made of all requests for the population of unincorporated places, and approximate figures will be sent, if and when available, to those who have made such request.

Enumeration at usual place of residence.—For the country as a whole, and for every State and every political subdivision within the State, the population reported is the resident or *de jure* population. The enumerators under the census law have been instructed to enumerate persons at their “usual place of residence” or “usual place of abode”—that is, at their permanent homes or regular lodging places. Hence persons were not in all cases counted in the places where they happened to be found by the enumerators; in particular, they were not always counted in the places where they worked or carried on their daily occupations. Thus it happens that the business or industrial population of any large city includes a considerable number of persons who are not counted as a part of the census population of the city. These persons carry on their business or perform their daily tasks, spend a considerable portion of their incomes, and perhaps eat all or part of their meals, in the city, but have their residences or lodging places outside the municipal limits.

Persons temporarily absent from their usual places of residence—for example, persons away from home on a visit or on business, traveling for pleasure, attending school or college, or sick in a hospital—were enumerated at their homes or the places where they usually live, information regarding them being obtained from some other member of their family or from relatives or acquaintances. Entire households away from home were enumerated where found, and the returns were allocated to their usual place of residence. Persons having no regular place of residence anywhere, however, were enumerated where they were found at the time of the enumeration and were counted as residents of that area.

Persons in the military service in the United States were enumerated as residents of the States, counties, and minor civil divisions in which their posts of duty were located, and members of their families were enumerated where they actually resided. The crews of vessels in the American merchant marine were enumerated as such and counted as a part of the population of the port from which the vessel operated.

United States and possessions.—Table 1 shows the population of the United States and its territories and possessions for 1940, 1930, and 1920. In the other tables of this section the figures are limited to the 48 States and the District of Columbia.

TABLE 1.—POPULATION OF THE UNITED STATES AND ITS TERRITORIES AND POSSESSIONS: 1940, 1930, AND 1920

AREA	Gross area (land and water) in square miles, 1940	POPULATION		
		1940	1930	1920
United States and all territories and possessions.....	3, 735, 223	150, 621, 231	138, 439, 069	118, 107, 150
Continental United States.....	3, 022, 387	131, 669, 275	122, 775, 046	105, 710, 620
Territories and possessions, exclusive of the Philippines.....	597, 236	2, 477, 023	2, 061, 570	1, 080, 292
Alaska.....	586, 400	³ 72, 524	³ 59, 278	55, 036
American Samoa.....	76	12, 908	10, 055	8, 056
Guam.....	206	22, 290	18, 509	13, 275
Hawaii.....	6, 433	423, 330	368, 336	255, 912
Panama Canal Zone.....	553	51, 827	39, 467	22, 858
Puerto Rico.....	3, 435	1, 869, 255	1, 643, 913	1, 299, 809
Virgin Islands of the United States.....	133	24, 889	22, 012	² 25, 346
The Philippines.....	115, 600	¹ 16, 356, 000	¹ 13, 513, 000	² 10, 599, 000
Military and naval services, etc., abroad.....		118, 933	80, 453	117, 238

¹ Revised. Differs from figure published in 1930 census reports; revised figure for the Philippines is an estimate derived by interpolation between censuses of Dec. 31, 1918 (10,314,310), and Jan. 1, 1939 (16,000,303).

² Revised. Differs from figure published in 1930 census reports; revised figure for Virgin Islands is an estimate derived by interpolation between censuses of Nov. 1, 1917 (26,051), and April 1, 1930; revised figure for the Philippines estimated by interpolation between censuses of 1918 and 1939.

³ Census taken as of Oct. 1 of the preceding year.

⁴ Includes Baker, Canton, Enderbury, Howland, Jarvis, Johnston, and Midway Islands.

⁵ Estimate derived by extrapolation from censuses of 1918 and 1939.

Population of continental United States from 1790.—

The areas now forming the 48 States and the District of Columbia were first completely enumerated in 1890, and all areas, except what is now the State of Oklahoma, were included also in the censuses of 1860, 1870, and 1880. The gradual increase in the territory ¹ covered by the census is indicated below.

The first census, taken in 1790, covered the area now occupied by the District of Columbia and the following States: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Kentucky, Tennessee, and part of Georgia.

In 1800 the enumerated territory was extended to include the areas of the present States of Ohio, Indiana, Illinois, Michigan, Wisconsin, and all but the ex-

¹ The sum of the areas enumerated was not always identical with the area included within the legal boundaries of the United States at the respective dates, nor was it always possible to indicate the exact boundaries of the enumerated areas. In the earlier censuses not all of a State or territory was covered by the enumerators but only that part up to the "frontier line" and any large isolated settlements beyond. For example, Iowa Territory in 1840 included all of what is now Iowa and most of what is now Minnesota, but within the Territory the only substantial settlements were in the southeastern corner of what is now Iowa, and hence only this part was covered by the census of 1840. It is not feasible to make a more exact statement than that the area of what is now Iowa was added to the area of enumeration in 1840. The western part of what is now Minnesota, however, was not included until later.

trreme northern and southern parts of Alabama and Mississippi.

In 1810 there were further additions, comprising the territory now forming the present State of Arkansas, all but the northwestern corner of Missouri, and all but the southwestern part of Louisiana. The extreme northern parts of Alabama and Mississippi were also first canvassed at this census.

In 1820 the southern tips of Alabama and Mississippi, the northwestern part of Georgia, and the southwestern part of Louisiana were covered. The territory was extended in 1830 to include Florida, and in 1840 to include Iowa, northeastern Minnesota, and the remaining part of Missouri.

In 1850 very sizable additions were made, comprising the territory that now forms Texas, Utah, Washington, Oregon, and California, and most of New Mexico.

In 1860 the area covered was brought up to its present extent, except for Oklahoma, which was first enumerated in 1890.

Table 2 shows the population of continental United States from 1790 to 1940, with the decennial increase, the land area included in the legal boundaries at each census, and the population per square mile.

TABLE 2.—POPULATION AND AREA OF CONTINENTAL UNITED STATES: 1790 TO 1940

1790 (Aug. 2).....	3, 929, 214			867, 980	4.5

¹ Percentage increases are computed on basis of change in population since preceding census date, and period covered therefore is not always exactly 10 years. Adjustments for differences in census date must be made if strictly comparable figures are desired for each decade.

² The figures given for the various census years represent the area of all the land within the present boundaries of continental United States which was under the jurisdiction of the United States on the date in question, including in some cases considerable areas of land not then organized or settled and not covered by the census.

³ A revised figure of 39,818,449 for the 1870 population includes adjustments for underenumeration in the Southern States. Unadjusted data are used in this and subsequent tables because revised figures for States, urban-rural residence, etc., are not available.

Data corresponding to those in table 2 are given in tables 3 to 5, which deal with population, decennial rates of increase, and population density, respectively, for individual regions, divisions, and States.

Apportionment.—The primary reason for the establishment of the decennial census of population, as set forth in the Constitution, was to provide a basis for the

apportionment of members of the House of Representatives among the several States. Such an apportionment has been made on the basis of every census from 1790 to 1940, except that of 1920. Prior to 1870, the population basis for apportionment was the total free population of the States, omitting Indians not taxed, plus three-fifths of the number of slaves. After the apportionment of 1860 the scaling down of the number of slaves, of course, disappeared from the procedure; and in 1940 it was determined that there were no longer any Indians who should be classed as "not

taxed" under the terms of the apportionment laws. The last apportionment was therefore made on the basis of the entire population of the 48 States. All apportionments are made under the constitutional provision that each State should have at least one Representative, no matter how small its population.

The results of each apportionment, starting with the initial apportionment in 1789 and including those based on each census from 1790 to 1940, are shown, by States, in table 2A.

TABLE 2A.—NUMBER OF MEMBERS IN HOUSE OF REPRESENTATIVES UNDER EACH APPORTIONMENT, BY STATES: 1789 TO 1940

[Includes Representatives assigned to newly admitted States after the apportionment act, as follows: 1790, 1; 1800, 1; 1810, 5; 1830, 2; 1840, 9; 1850, 3; 1860, 2; 1870, 1; 1880, 7; 1890, 1; and 1900, 5]

1860.....	29,550,038	241	122,614	May 23, 1860. ⁵
1850.....	21,766,691	234	93,020	May 23, 1850. ⁶
1840.....	15,908,376	223	71,338	June 25, 1842.
1830.....	11,930,987	240	49,712	May 22, 1832.
1820.....	8,972,396	213	42,124	Mar. 7, 1822.
1810.....	6,554,231	181	36,377	Dec. 21, 1811.
1800.....	4,879,820	141	34,609	Jan. 14, 1802.
1790.....	3,615,823	105	34,436	Apr. 14, 1792.
		65	30,000	Constitution, 1789.

¹ Excludes the population of the District of Columbia, the population of the territories, the number of Indians not taxed, and (prior to 1870) two-fifths of the slave population.
² This number is the actual number apportioned at the beginning of the decade.
³ No apportionment was made after the census of 1920.
⁴ Amended by act of May 30, 1872.
⁵ Amended by the act of Mar. 4, 1862.
⁶ Amended by act of July 30, 1852.
⁷ The minimum ratio of population to Representatives stated in the Constitution (art. 1, sec. 2).

The first attempt to make provision for automatic reapportionment was included in the act for the taking of the seventh and subsequent censuses (approved May 23, 1850). By specifying the number of Representatives to be assigned and the method to be used, it was hoped to eliminate the need for a new act of Congress every decade and assure an equitable distribution of Representatives. When this Census Act was superseded in 1879, the automatic feature was discontinued

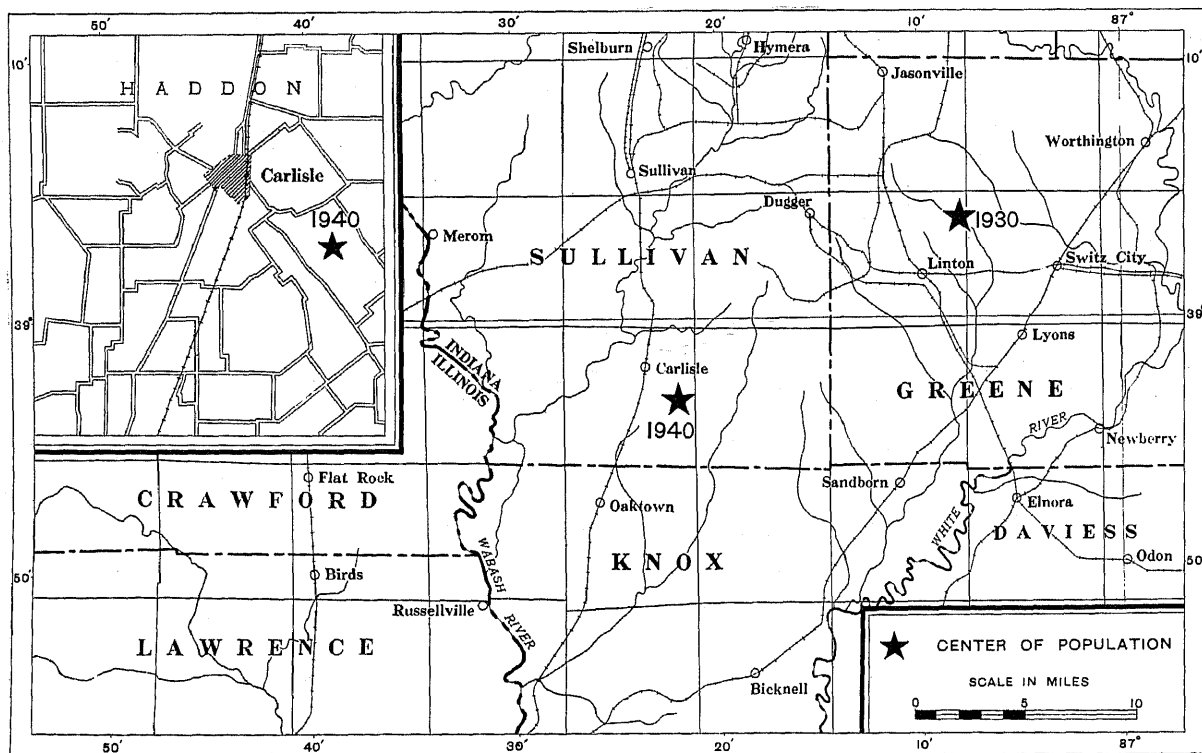

and the method of computing the apportionment was determined by Congress on each occasion up to 1910.

No apportionment was made after the census of 1920, the apportionment of 1910 remaining in effect. In 1929, when the act for the taking of the fifteenth and subsequent censuses was under consideration, it seemed desirable to incorporate some provision which might prevent the repetition of the 1920 experience. A section was, therefore, included in the act which provided, for the 1930 and subsequent censuses, that unless Congress within a specified time enacted legislation providing for apportionment on a different basis, the apportionment should be made automatically by the method last used. In accordance with this act, a report was submitted by the President to Congress on December 4, 1930, showing the apportionment computations both by the method of major fractions (which was the one used in 1910) and by the method of equal proportions. In 1931, in the absence of additional legislation, the automatically effective apportionment followed the method of major fractions.

The census of 1940 was taken under the same law as that of 1930, but in 1941 this law was amended to the effect that apportionments based on the 1940 and subsequent censuses should be made by the method of equal proportions. In the application of this method, the Representatives are so assigned that the average population per Representative has the least possible relative variation as between one State and any other.

Under this method, California gained three Representatives between 1930 and 1940 and six other States, namely, Arizona, Florida, New Mexico, North Carolina, Oregon, and Tennessee, each gained one. To balance these gains, since the number of Representatives in the

CENTER OF POPULATION: 1940 AND 1930

House was not changed, there were nine States which lost one Representative each, namely, Illinois, Indiana, Iowa, Kansas, Massachusetts, Nebraska, Ohio, Oklahoma, and Pennsylvania.

Center of population.—The “center of population,” as defined by the Census Bureau, is that point which may be considered as the center of gravity of the United States; in other words, the point upon which the United States would balance, if it were a rigid plane without weight and the population distributed thereon, with each individual being assumed to have equal weight and to exert an influence on a central point proportional to his distance from the point.

The 1940 center of population is located 2.0 miles southeast by east of Carlisle, in Haddon township, Sullivan County, Indiana. This point is in southwestern Indiana, 36.0 miles south of Terre Haute and 20.0 miles north-northeast of Vincennes. In terms of

latitude and longitude, the 1940 center is located in latitude 38°56'54" north, longitude 87°22'35" west. During the decade from 1930 to 1940, the center of population moved 13.0 miles westward and 7.9 miles southward, reaching its most southerly point. The location of the center of population in 1940 and in 1930 is shown on the map on the opposite page.

The total westward movement from 1790 to 1940 was 602 miles. The greatest movement westward was during the decade from 1850 to 1860, when the center advanced 80.6 miles. The least movement westward was during the decade from 1910 to 1920, when it advanced only 9.8 miles. The point farthest north was the 1790 location, and the point farthest south, the 1940 location, but the difference was only 22.5 miles.

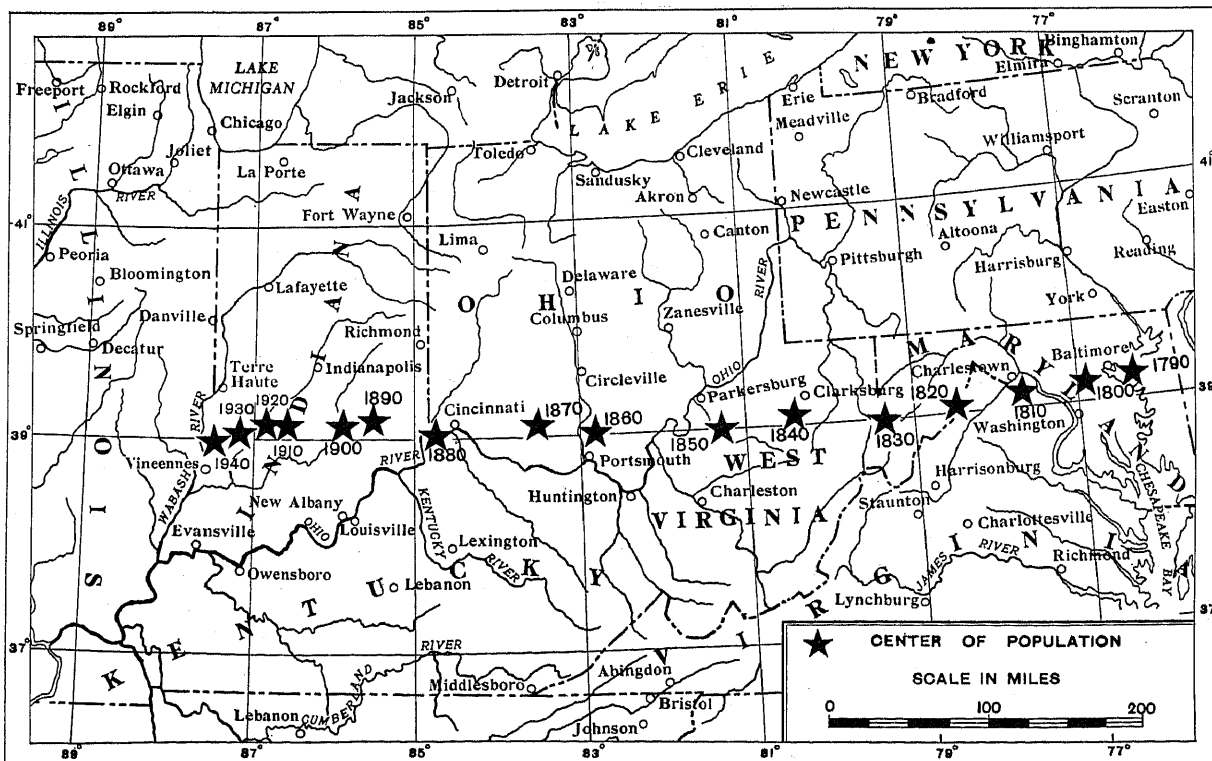

The table and map below give the approximate location of the center of population of the United States at each census from 1790 to 1940.

TABLE 2C.—LOCATION OF THE CENTER OF POPULATION OF THE UNITED STATES: 1790 TO 1940

YEAR	North latitude			West longitude			Approximate location
	°	'	"	°	'	"	
1790	39	16	30	76	11	12	23 miles east of Baltimore, Md.
1800	39	16	6	76	56	30	18 miles west of Baltimore, Md.
1810	39	11	30	77	37	12	40 miles northwest by west of Washington, D. C. (in Virginia).
1820	39	5	42	78	33	0	16 miles east of Moorefield, W. Va. ¹
1830	38	57	54	79	16	54	19 miles west-southwest of Moorefield, W. Va. ¹
1840	39	2	0	80	18	0	16 miles south of Clarksburg, W. Va. ¹
1850	38	50	0	81	19	0	23 miles southeast of Parkersburg, W. Va. ¹
1860	39	0	24	82	48	48	20 miles south by east of Chillicothe, Ohio.
1870	39	12	0	83	35	42	48 miles east by north of Cincinnati, Ohio.
1880	39	4	8	84	39	40	8 miles west by south of Cincinnati, Ohio (in Kentucky).
1890	39	11	56	85	32	53	20 miles east of Columbus, Ind.
1900	39	9	36	85	43	54	6 miles southeast of Columbus, Ind.
1910	39	10	12	86	32	20	In the city of Bloomington, Ind.
1920	39	10	21	86	43	15	8 miles south-southeast of Spencer, Owen County, Ind.
1930	39	3	45	87	8	6	3 miles northeast of Linton, Greene County, Ind.
1940	38	56	54	87	22	35	2 miles southeast by east of Carlisle, Haddon township, Sullivan County, Ind.

¹ West Virginia was set off from Virginia Dec. 31, 1862, and admitted as a State June 19, 1863.

CENTER OF POPULATION: 1790 TO 1940

Urban and rural areas.—In the course of its history the census has employed several definitions of urban population. The current definition was adopted in substantially its present form at the time of the 1910 census and was slightly modified in 1920 and again in 1930. The present compilation, which has been extended back to 1790, is made on the basis of the definition of urban population employed in 1930 and 1940.

The urban area is made up for the most part of cities and other incorporated places having 2,500 inhabitants or more, places of this type constituting about 96 percent of the urban places in the United States. A second type is limited to the States of New Hampshire, Massachusetts, and Rhode Island, in which States it is not the practice to incorporate as municipalities places of less than 10,000. This type is made up of towns (townships) in which there is a village or thickly settled area having 2,500 inhabitants or more and comprising, either by itself or when combined with other villages within the same town, more than 50 percent of the total population of the town. This type of urban places comprised, in 1940, 7 towns in New Hampshire, 83 towns in Massachusetts, and 12 towns in Rhode Island. A third type of urban places is made up of townships and other political subdivisions (not incorporated as municipalities, nor containing any areas so incorporated) with a total population of 10,000 or more and a population density of 1,000 or more per square mile. Under the special rule establishing this type, urban classification was given in 1940 to places distributed as follows: 4 towns in Connecticut, 1 town in New York, 12 townships in New Jersey, 11 townships in Pennsylvania, 2 election districts in Maryland, 1 county (which had no minor civil divisions) in Virginia, 1 militia district in Georgia, and 1 township in California.

The individual places of types 2 and 3 that have been brought into the urban classification are included in the tables presenting the population of the various groups of urban places (tables 13 to 15) and marked with an asterisk (*).

The rural population is by no means identical with the farm population, that is, the population living on farms. (The rural-nonfarm population of the United States is now nearly as large as the rural-farm population.) Practically all of the farm population is rural, however. Statistics of the farm population are presented in the second and later series of Population bulletins, and in the volumes devoted to the detailed classification of the population data.

The total, urban, and rural population, and the decennial increase in each, are presented for all the census years from 1790 to 1940 for the United States as a whole in table 6, for regions, divisions, and States for 1940 and 1930 in some detail in table 7, and in less detail from 1790 to 1940 in table 8. The urban and rural population of the United States at each census is also shown graphically in the following chart.

Places grouped according to size.—For the convenience of those who are interested in places of various sizes, statistics are presented in tables 12 to 16 for the urban places arranged in groups according to size. In table 12 is presented the population of cities having 100,000 inhabitants or more in 1940, with comparative figures running back to the first census in which the city appears. Table 13 shows the population of urban places having 25,000 inhabitants or more in 1940, with comparative figures from 1910; table 14 shows the population for 1940, 1930, and 1920 of urban places having from 5,000 to 25,000 inhabitants; and table 15 presents similar figures for urban places having from 2,500 to 5,000 inhabitants. The places listed in these tables, taken together, comprise the urban classification in 1940.

URBAN AND RURAL POPULATION OF THE UNITED STATES:
1790 TO 1940

Table 16 shows the population of the larger incorporated places which are included in the rural classification, namely, those having from 1,000 to 2,500 inhabitants.²

The total population in each of the various size groups is summarized for the United States for 1940 and 1930 in table 9, which also indicates the changes in the number of places of each size between 1930 and 1940. Table 10 shows the total population in each of the groups for all the censuses from 1790 to 1940. Table 11 gives the number of places in each of the size groups, with their population, by regions, divisions, and States, for 1940 and 1930.

Counties.—The population is shown by counties, for 1940, 1930, and 1920, in table 3 in the sections for the States, together with the land area and the number of persons per square mile for 1940. The land areas

² The population of incorporated places having fewer than 1,000 inhabitants in any State is shown in table 5 in the section for that State.

given for 1940 are the results of the first complete re-measurement of the United States since 1881, rendered possible by greatly improved maps prepared during the last decade. These land areas, of course, differ somewhat from those published in earlier census reports. The urban and rural population of the counties is shown in table 3 of the sections for the respective States.

Maps.—The population density and the percentage change in population are shown graphically, by counties, on the maps on pages 2, 4, and 12, respectively.

The dot map, in which each dot represents 2,000 inhabitants, gives the most accurate picture of the distribution of population, since each dot has been placed with extreme care, using large scale county maps and State minor civil division outline maps for reference. In placing these dots, consideration was given to the location of cities and the course followed by railroads, highways, and rivers. On this map population densities are suggested by the variation in spacing between dots. The dots are piled up to form black patches for cities, and in the sparsely settled lands of the West, a population thinly distributed over a large area may be represented by a single dot at one central point.

The shaded density map shows population per square mile by counties. Of necessity, it generalizes the material shown, for individual county densities give way to class intervals, and individual variations of density cannot be distinguished within the county average.

The population increase-decrease map shows an important aspect of population change. Care should be exercised in the use of this map, for, in addition to the data being necessarily generalized by county units, the percentage of increase or decrease in population is a relative measure which obscures absolute population changes. A 2 percent increase for a New York county may result from a much greater absolute change in the total population than a 25 percent increase in a county in the sparsely settled West.

Institutions.—The population of institutions and military posts is included as a part of the population of the city, township, or other political area in which the institution or post is located. This institutional population in some cases forms an appreciable fraction of the total population of the city or town; and sometimes it seriously affects the distribution of the total by sex, age, or other characteristics. It has not been found practicable, however, to make any general provision for showing separately the population of the institutions. Usually, the population of the institution is readily available, so that due allowance may be made for its inclusion. In fact, the Census Bureau is in a position to furnish the 1940 census population of many of the larger institutions on request.

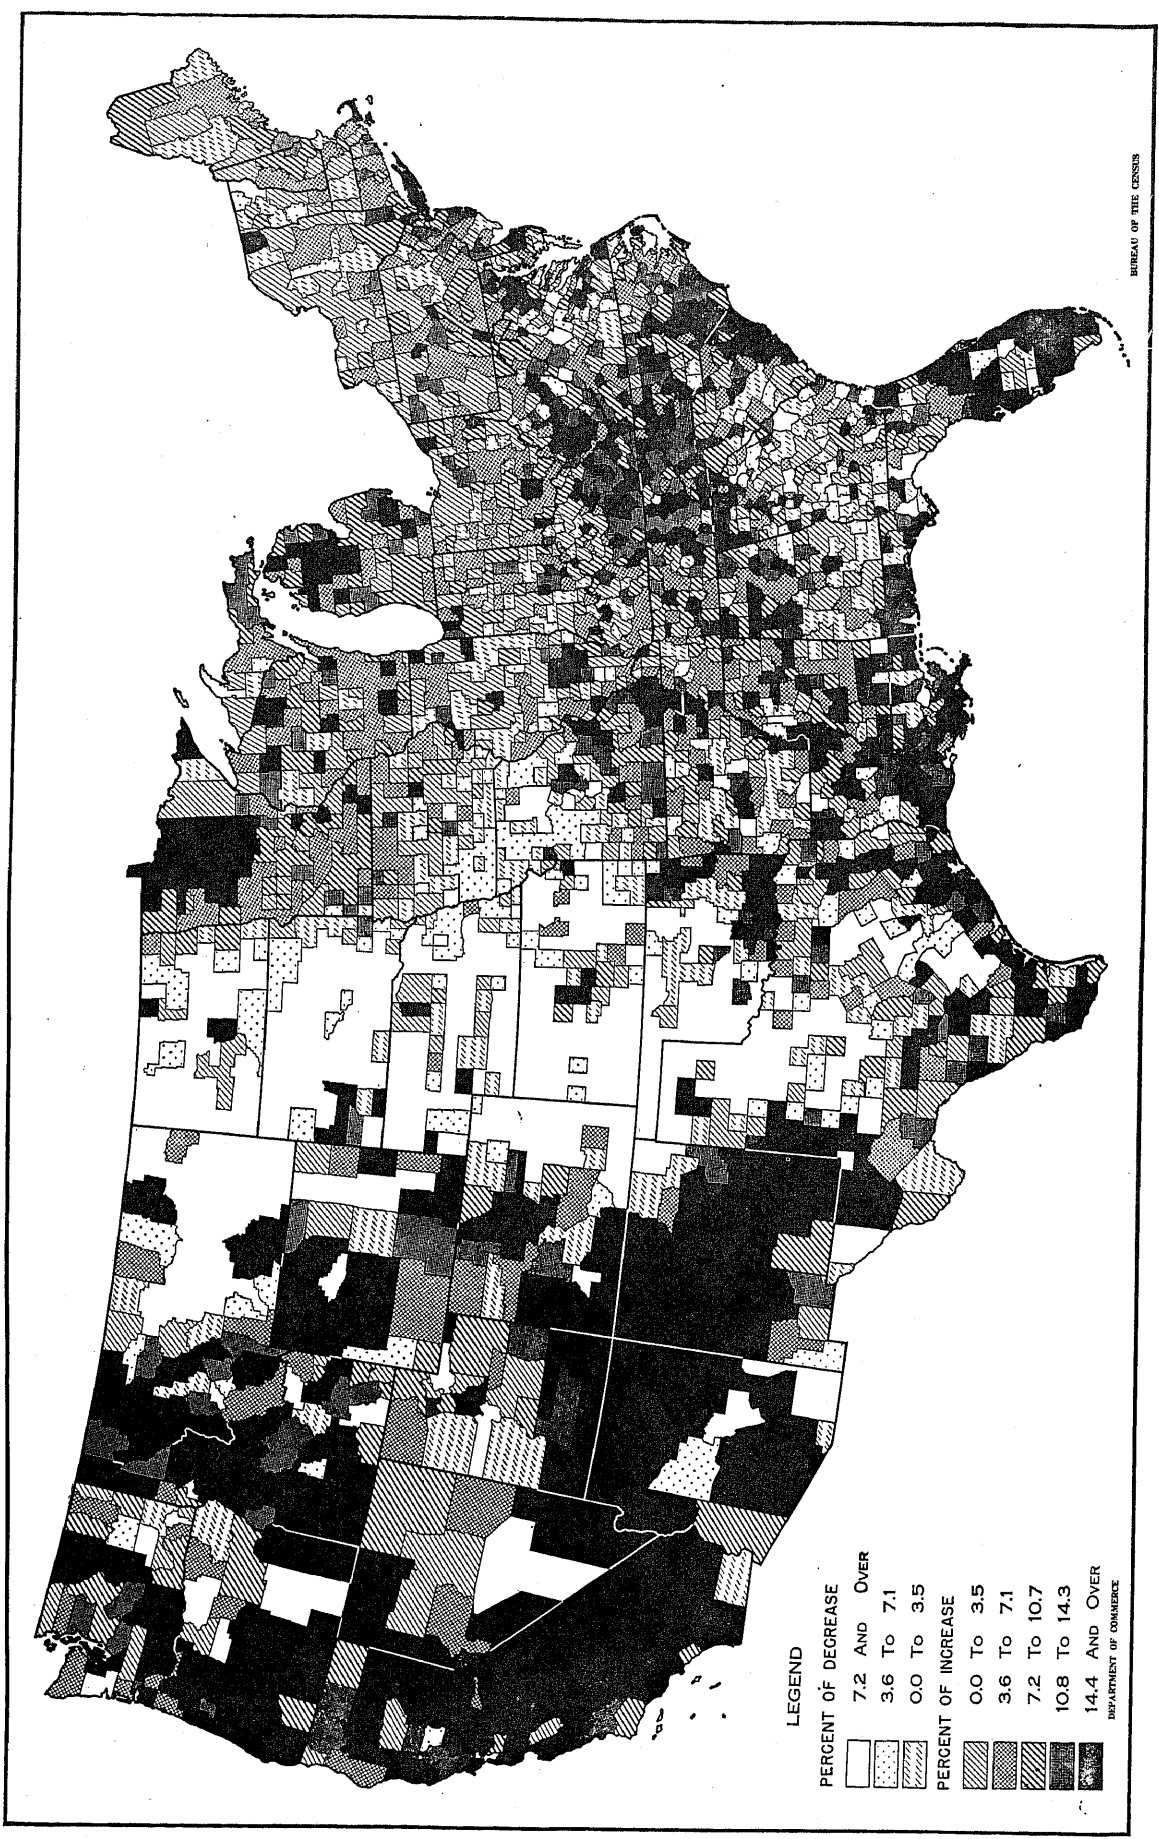

Metropolitan districts.—A metropolitan district has been set up for use in the 1940 census of population in connection with each city of 50,000 or more, two or more such cities sometimes being in one district. The general plan is to include in the district, in addition to the central city or cities, all adjacent and contiguous minor civil divisions or incorporated places having a population of 150 or more per square mile. In some metropolitan districts, a few less densely populated contiguous divisions are included on the basis of special qualifications. Occasionally only a portion of a minor civil division is included if the minor civil division has a large area and the principal concentration of population is in a small section in or near the central city, with the more remote sections being sparsely settled. In such cases, the unit considered is not the minor civil division but component enumeration districts. A metropolitan district is thus not a political unit but rather an area including all of the thickly settled territory in and around a city or group of cities. It tends to be a more or less integrated area with common economic, social, and, often, administrative interests.

Table 17 presents the population, land area, and population per square mile for each metropolitan district in 1940 (see map on p. 13) and also separately for its central city or cities and the area within the metropolitan district but outside the city. Table 18 gives the population of the metropolitan districts in 1940 and, for all except the seven districts where complete figures are not available, the population in 1930, together with the increase or decrease during the decade. The same statistics are also given in this table for the central city (or cities) and the outside area. Maps of individual metropolitan districts appear at the end of the section for each State.

Census tracts.—Census tracts are small areas into which certain large cities and sometimes their adjacent areas are subdivided for statistical and local administrative purposes, through cooperation with a local committee in each case. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include for the most part approximately equal numbers of inhabitants or equal areas; and each tract is designed to include an area fairly homogeneous in population characteristics. There are now 10,461 census tracts, in or adjacent to 60 cities, the list including all cities of 250,000 or more and a few smaller ones.

In table 19 is presented a list of the areas for which 1940 census tract statistics are available, together with an indication as to the availability of comparable 1930 figures. Table 8 in each State section gives, by tracts, the population of the tracted areas in that State.

* 1880 figure is for Dakota Territory. Figures for 1870 and 1880 for North Dakota and South Dakota are for the parts of Dakota Territory which later constituted the respective States.

† Includes population of Indian Territory as follows: 1900, 392,060; 1890, 180,182.

NUMBER OF INHABITANTS

TABLE 4.—DECENNIAL RATES OF INCREASE IN POPULATION, BY DIVISIONS AND STATES: 1790 TO 1940

[A minus sign (—) denotes decrease. Percent not shown where less than 0.1]

¹ Percent of increase in population from 1860 to 1870 is for Dakota Territory; percents from 1870 to 1880 and from 1880 to 1890 are for the parts of Dakota Territory that later constituted the States of North and South Dakota.

² Decrease due to loss of territory. West Virginia having been detached from Virginia and admitted as a separate State in 1863, and two additional counties having been annexed to West Virginia in 1866.

POPULATION OF THE UNITED STATES AND REGIONS: 1790 TO 1940

NUMBER OF INHABITANTS

TABLE 5.—POPULATION PER SQUARE MILE, BY DIVISIONS AND STATES: 1910 TO 1940

(The 1940 and 1930 densities are based on new measurements of land area, but the figures shown for 1920 and 1910 are based on the accepted land area figures of those dates)

¹ In 1940 Bluefield, Va., and Bluefield, W. Va.; Bristol, Tenn., and Bristol, Va.; Delmar, Del., and Delmar, Md.; Harrison, Ohio, and West Harrison, Ind.; Junction City, Ark., and Junction City, La.; Texarkana, Ark., and Texarkana, Tex.; Texhoma, Okla., and Texhoma, Tex.; and Union City, Ind., and Union City, Ohio, were counted as separate incorporated places, whereas in 1930 each pair was counted as a single place. If the 1930 treatment had been applied in 1940, there would have been three fewer urban places (two fewer in each of the groups 2,500 to 5,000 and 10,000 to 25,000, and one more in the group 25,000 to 50,000). There would also have been five fewer rural incorporated places (all in the group of less than 1,000 population).

NUMBER OF INHABITANTS

¹ In 1940 Bluefield, Va., and Bluefield, W. Va.; Bristol, Tenn., and Bristol, Va.; Delmar, Del., and Delmar, Md.; Harrison, Ohio, and West Harrison, Ind.; Junction City, Ark., and Junction City, La.; Texarkana, Ark., and Texarkana, Tex.; Texhoma, Okla., and Texhoma, Tex.; and Union City, Ind., and Union City, Ohio, were counted as separate incorporated places, whereas in 1930 and earlier years each pair was counted as a single place. If the 1930 treatment had been applied in 1940 there would have been 3 fewer urban places (2 fewer in each of the groups 2,500 to 5,000 and 10,000 to 25,000, and 1 more in the group 25,000 to 50,000). There would also have been 5 fewer rural incorporated places (all in the group of less than 1,000 population).

² Not returned separately.

¹ Population shown for years prior to 1900 is for New York and its boroughs as constituted under the act of consolidation in 1898.

² Corrected since publication of vol. I, 1930.

³ Hyde Park town annexed to Boston city between 1910 and 1920. Combined population: 1910, 686,092; 1900, 574,136; 1890, 458,670; 1880, 369,927; 1870, 254,362. Hyde Park town not returned separately at earlier censuses.

⁴ Includes population of Allegheny city as follows: 1900, 129,896; 1890, 105,287; 1880, 78,682; 1870, 53,180; 1860, 28,702; 1850, 21,262; 1840, 10,089; and 1830, 2,801. Allegheny city not returned separately at earlier censuses.

⁵ City has been coextensive with the District of Columbia since 1895.

UNITED STATES SUMMARY

TABLE 13.—POPULATION OF URBAN PLACES HAVING, IN 1940, 25,000 INHABITANTS OR MORE: 1910 TO 1940—Con.

[Places marked with an asterisk (*) were classified as urban under special rule in 1940. A minus sign (—) denotes decrease. Percent not shown where less than 0.1]

URBAN PLACE	POPULATION				PERCENT OF INCREASE			URBAN PLACE	POPULATION				PERCENT OF INCREASE		
	1940	1930	1920	1910	1930 to 1940	1920 to 1930	1910 to 1920		1940	1930	1920	1910	1930 to 1940	1920 to 1930	1910 to 1920

¹ Corrected figure.

² Population for 1940 was originally reported as 2,549, a figure based on an erroneous inclusion of an area outside the village. This figure was later corrected to 1,409, the figure shown in table 16; but the original figure is included in urban totals and in totals for urban places of 2,500 to 5,000 shown in other tables.

³ Information as to incorporation in 1939 received too late for inclusion of figures in urban totals and in totals for urban places of 2,500 to 5,000 shown in other tables.

NUMBER OF INHABITANTS

TABLE 16.—POPULATION OF INCORPORATED PLACES HAVING, IN 1940, FROM 1,000 TO 2,500 INHABITANTS: 1940 AND 1930—Continued

INCORPORATED PLACE	1940	1930	INCORPORATED PLACE	1940	1930	INCORPORATED PLACE	1940	1930	INCORPORATED PLACE	1940	1930
Florida—Continued			Georgia—Continued			Illinois—Continued			Illinois—Continued

¹ Corrected figure.

² Population for 1940 originally reported as 2,549 because of the erroneous inclusion of an area outside the village. Corrected figures were compiled too late to permit inclusion in totals for incorporated places of 1,000 to 2,500 in other tables. Original figure is included in urban totals and in totals for urban places of 2,500 to 5,000.

UNITED STATES SUMMARY

TABLE 18.—POPULATION OF METROPOLITAN DISTRICTS: 1940 AND 1930

[In the case of metropolitan districts defined in 1930, comparative figures for 1930 represent the population of the area as defined in 1930. Comparative figures are also shown for the metropolitan districts defined for the first time in 1940 if 1930 figures can be secured for exactly the same area. Such figures are obtainable for all but seven of the new metropolitan districts. For the areas included within each metropolitan district, see the reports for the individual States. A minus sign (—) denotes decrease]

NUMBER OF INHABITANTS

TABLE 18.—POPULATION OF METROPOLITAN DISTRICTS: 1940 AND 1930—Continued

In the case of metropolitan districts defined in 1930, comparative figures for 1930 represent the population of the area as defined in 1930. Comparative figures are also shown for the metropolitan districts defined for the first time in 1940 if 1930 figures can be secured for exactly the same area. Such figures are obtainable for all but seven of the new metropolitan districts. For the areas included within each metropolitan district, see the reports for the individual States. A minus sign (—) denotes decrease.

NUMBER OF INHABITANTS

TABLE 18.—POPULATION OF METROPOLITAN DISTRICTS: 1940 AND 1930—Continued

(In the case of metropolitan districts defined in 1930, comparative figures for 1930 represent the population of the area as defined in 1930. Comparative figures are also shown for the metropolitan districts defined for the first time in 1940 if 1930 figures can be secured for exactly the same area. Such figures are obtainable for all but seven of the new metropolitan districts. For the areas included within each metropolitan district, see the reports for the individual States. A minus sign (—) denotes decrease.)
