# 1970 CENSUS OF POPULATION

February 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

PC(V2)-40

**PENNSYLVANIA**

advance report

## General Population Characteristics

*(This series consists of 52 reports—number 1 for the United States and numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than order of publication.)*

This report presents 1970 census statistics on the basic demographic characteristics of the inhabitants of the State. Data on age, sex, race, and relationship to head of household are shown for the State, each standard metropolitan statistical area, each place of 10,000 inhabitants or more, and each county or comparable area.

The data presented here are being issued in advance of their publication in Final Report Series PC(1)-B, which will provide additional information on the population characteristics of the inhabitants of the State. The final report for this State will be published in about 2 months.

Statistics on selected housing characteristics for the areas shown in this report are currently being issued in Advance Report Series HC(V1). An outline of the publication program for the 1970 Census of Population and Housing can be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

**Standard metropolitan statistical areas.**—The Bureau of the Census recognizes approximately 250 standard metropolitan statistical areas (SMSA's) in the 1970 census. These include the 231 SMSA's (including three in Puerto Rico) as defined and named in the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas: 1967*, U.S. Government Printing Office, Washington, D.C. 20402. Also included are two SMSA's as defined by the Bureau of the Budget in January 1968. In addition, a number of SMSA's are being defined on the basis of the results from the 1970 census.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. For a complete description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

**Places.**—Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Unincorporated places are identified with the letter "U."

**Towns.**—In this series of reports, data for towns of 10,000 inhabitants or more are shown in the reports for the New England States. In these States, towns are the primary political subdivision of the county, unlike most other States where towns are generally incorporated places.

**Race.**—The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. Rather it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who are in doubt as to their classification, the race of the person's father is used. Persons of Mexican or Puerto Rican birth or ancestry who do not identify themselves as of a race other than white (e.g., American Indian, Negro, etc.), are classified as white. In the 3-category grouping shown in this report, the "other" category consists of all races except white or Negro, i.e., American Indian, Japanese, Chinese, Filipino, Korean, Eskimo, etc.

**Age.**—The age classification is based on the age of the person in completed years as of April 1, 1970.

**Households and group quarters.**—All persons are classified as living in either a household or group quarters.

A household consists of all the persons who occupy a housing unit. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which quarters have either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants. A household may, therefore, consist of a single family, one person living alone, two or more families living together, or any other group of related or nonrelated persons who share living arrangements (except as described in the next paragraph on group quarters).

Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons.

Persons in group quarters are subdivided here into "inmate of institution" and "other." The former are persons for whom care or custody is provided in such places as homes and schools for the mentally or physically handicapped, places providing long-term medical care for persons with mental disorders or chronic diseases, homes for dependent children, prisons, etc. Staff members living in group quarters in such places, as well as persons in all the other types of group quarters, are classified as "other."

**Relationship to head of household.**—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. Two types of head of household are recognized here—the head of a family and a primary individual. A family head is a person living with one or more relatives (persons related to him by blood, marriage, or adoption). A primary individual is a household head living alone or with nonrelatives only.

In this report, all household members other than the head are shown in one of the following three categories: (1) "wife of head"—a woman married (either by formal or common law marriage) to the household head; (2) "other relative of head"—all persons related to the head by blood, marriage, or adoption (excluding wife of head); or (3) "not related to head"—all persons not related to the head by blood, marriage, or adoption.

**Symbols.**—A dash "—" represents zero. The symbol "U" means that the place is unincorporated. Three dots "..." indicate that the data are being withheld to avoid disclosure of information for individuals.

Allentown-Bethlehem-Easton, Pa.-N.J. SMSA—Data shown in this report relate only to the portion of this SMSA in Pennsylvania; the data for the portion of this SMSA in New Jersey appear in advance report PC(V2)-32 for New Jersey.

Binghamton, N.Y.-Pa. SMSA—Data shown in this report relate only to the portion of this SMSA in Pennsylvania; the data for the portion of this SMSA in New York appear in advance report PC(V2)-34 for New York.

Philadelphia, Pa.-N.J. SMSA—Data shown in this report relate only to the portion of this SMSA in Pennsylvania; the data for the portion of this SMSA in New Jersey appear in advance report PC(V2)-32 for New Jersey.

# 1970 CENSUS OF POPULATION

January 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

PC(V2)-41

**RHODE ISLAND**

advance report

## General Population Characteristics

*(This series consists of 52 reports—number 1 for the United States and numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than order of publication.)*

This report presents 1970 census statistics on the basic demographic characteristics of the inhabitants of the State. Data on age, sex, race, and relationship to head of household are shown for the State, each standard metropolitan statistical area, each place of 10,000 inhabitants or more, and each county or comparable area.

The data presented here are being issued in advance of their publication in Final Report Series PC(1)-B, which will provide additional information on the population characteristics of the inhabitants of the State. The final report for this State will be published in about 2 months.

Statistics on selected housing characteristics for the areas shown in this report are currently being issued in Advance Report Series HC(V1). An outline of the publication program for the 1970 Census of Population and Housing can be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

**Standard metropolitan statistical areas.**—The Bureau of the Census recognizes approximately 250 standard metropolitan statistical areas (SMSA's) in the 1970 census. These include the 231 SMSA's (including three in Puerto Rico) as defined and named in the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas: 1967*, U.S. Government Printing Office, Washington, D.C. 20402. Also included are two SMSA's as defined by the Bureau of the Budget in January 1968. In addition, a number of SMSA's are being defined on the basis of the results from the 1970 census.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. For a complete description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

**Places.**—Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Unincorporated places are identified with the letter "U."

**Towns.**—In this series of reports, data for towns of 10,000 inhabitants or more are shown in the reports for the New England States. In these States, towns are the primary political subdivision of the county, unlike most other States where towns are generally incorporated places.

**Race.**—The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. Rather it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who are in doubt as to their classification, the race of the person's father is used. Persons of Mexican or Puerto Rican birth or ancestry who do not identify themselves as of a race other than white (e.g., American Indian, Negro, etc.), are classified as white. In the 3-category grouping shown in this report, the "other" category consists of all races except white or Negro, i.e., American Indian, Japanese, Chinese, Filipino, Korean, Eskimo, etc.

**Age.**—The age classification is based on the age of the person in completed years as of April 1, 1970.

**Households and group quarters.**—All persons are classified as living in either a household or group quarters.

A household consists of all the persons who occupy a housing unit. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which quarters have either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants. A household may, therefore, consist of a single family, one person living alone, two or more families living together, or any other group of related or nonrelated persons who share living arrangements (except as described in the next paragraph on group quarters).

Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons.

Persons in group quarters are subdivided here into "inmate of institution" and "other." The former are persons for whom care or custody is provided in such places as homes and schools for the mentally or physically handicapped, places providing long-term medical care for persons with mental disorders or chronic diseases, homes for dependent children, prisons, etc. Staff members living in group quarters in such places, as well as persons in all the other types of group quarters, are classified as "other."

**Relationship to head of household.**—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. Two types of head of household are recognized here—the head of a family and a primary individual. A family head is a person living with one or more relatives (persons related to him by blood, marriage, or adoption). A primary individual is a household head living alone or with nonrelatives only.

In this report, all household members other than the head are shown in one of the following three categories: (1) "wife of head"—a woman married (either by formal or common law marriage) to the household head; (2) "other relative of head"—all persons related to the head by blood, marriage, or adoption (excluding wife of head); or (3) "not related to head"—all persons not related to the head by blood, marriage, or adoption.

**Symbols.**—A dash "—" represents zero. The symbol "U" means that the place is unincorporated. Three dots "..." indicate that the data are being withheld to avoid disclosure of information for individuals.

## CORRECTION NOTE

The corrected 1970 population count for the State is 949,723. The detailed distributions shown in this report have not been revised to reflect this correction because the errors were discovered after the tabulations were made. Further information will be provided in the PC(1)-A final report for this State.

Fall River, Mass.-R.I. SMSA—Data shown in this report relate only to the portion of this SMSA in Rhode Island; the data for the portion of this SMSA in Massachusetts appear in advance report PC(V2)-23 for Massachusetts.

Providence-Pawtucket-Warwick, R.I.-Mass. SMSA—Data shown in this report relate only to the portion of this SMSA in Rhode Island; the data for the portion of this SMSA in Massachusetts appear in advance report PC(V2)-23 for Massachusetts.

# 1970 CENSUS OF POPULATION

February 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

PC(V2)-42

**SOUTH CAROLINA**

advance report

LIBRARY OF THE BUREAU OF THE CENSUS  
FEB 19 12 33 PM '71

## General Population Characteristics

*(This series consists of 52 reports—number 1 for the United States and numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than order of publication.)*

This report presents 1970 census statistics on the basic demographic characteristics of the inhabitants of the State. Data on age, sex, race, and relationship to head of household are shown for the State, each standard metropolitan statistical area, each place of 10,000 inhabitants or more, and each county or comparable area.

The data presented here are being issued in advance of their publication in Final Report Series PC(1)-B, which will provide additional information on the population characteristics of the inhabitants of the State. The final report for this State will be published in about 2 months.

Statistics on selected housing characteristics for the areas shown in this report are currently being issued in Advance Report Series HC(V1). An outline of the publication program for the 1970 Census of Population and Housing can be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

**Standard metropolitan statistical areas.**—The Bureau of the Census recognizes approximately 250 standard metropolitan statistical areas (SMSA's) in the 1970 census. These include the 231 SMSA's (including three in Puerto Rico) as defined and named in the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas: 1967*, U.S. Government Printing Office, Washington, D.C. 20402. Also included are two SMSA's as defined by the Bureau of the Budget in January 1968. In addition, a number of SMSA's are being defined on the basis of the results from the 1970 census.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. For a complete description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

**Places.**—Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Unincorporated places are identified with the letter "U."

**Towns.**—In this series of reports, data for towns of 10,000 inhabitants or more are shown in the reports for the New England States. In these States, towns are the primary political subdivision of the county, unlike most other States where towns are generally incorporated places.

**Race.**—The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. Rather it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who are in doubt as to their classification, the race of the person's father is used. Persons of Mexican or Puerto Rican birth or ancestry who do not identify themselves as of a race other than white (e.g., American Indian, Negro, etc.), are classified as white. In the 3-category grouping shown in this report, the "other" category consists of all races except white or Negro, i.e., American Indian, Japanese, Chinese, Filipino, Korean, Eskimo, etc.

**Age.**—The age classification is based on the age of the person in completed years as of April 1, 1970.

**Households and group quarters.**—All persons are classified as living in either a household or group quarters.

A household consists of all the persons who occupy a housing unit. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which quarters have either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants. A household may, therefore, consist of a single family, one person living alone, two or more families living together, or any other group of related or nonrelated persons who share living arrangements (except as described in the next paragraph on group quarters).

Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons.

Persons in group quarters are subdivided here into "inmate of institution" and "other." The former are persons for whom care or custody is provided in such places as homes and schools for the mentally or physically handicapped, places providing long-term medical care for persons with mental disorders or chronic diseases, homes for dependent children, prisons, etc. Staff members living in group quarters in such places, as well as persons in all the other types of group quarters, are classified as "other."

**Relationship to head of household.**—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. Two types of head of household are recognized here—the head of a family and a primary individual. A family head is a person living with one or more relatives (persons related to him by blood, marriage, or adoption). A primary individual is a household head living alone or with nonrelatives only.

In this report, all household members other than the head are shown in one of the following three categories: (1) "wife of head"—a woman married (either by formal or common law marriage) to the household head; (2) "other relative of head"—all persons related to the head by blood, marriage, or adoption (excluding wife of head); or (3) "not related to head"—all persons not related to the head by blood, marriage, or adoption.

**Symbols.**—A dash "—" represents zero. The symbol "U" means that the place is unincorporated. Three dots "... " indicate that the data are being withheld to avoid disclosure of information for individuals.

Augusta, Ga.-S.C. SMSA—Data shown in this report relate only to the portion of this SMSA in South Carolina, the data for the portion of this SMSA in Georgia appear in advance report PC(V2)-12 for Georgia.

# 1970 CENSUS OF POPULATION

November 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

PC(V2)-43

**SOUTH DAKOTA**

advance report

## General Population Characteristics

*(This series consists of 52 reports—number 1 for the United States and numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than order of publication.)*

This report presents 1970 census statistics on the basic demographic characteristics of the inhabitants of the State. Data on age, sex, race, and relationship to head of household are shown for the State, each standard metropolitan statistical area, each place of 10,000 inhabitants or more, and each county or comparable area.

The data presented here are being issued in advance of their publication in Final Report Series PC(1)-B, which will provide additional information on the population characteristics of the inhabitants of the State. The final report for this State will be published in about 2 months.

Statistics on selected housing characteristics for the areas shown in this report are currently being issued in Advance Report Series HC(V1). An outline of the publication program for the 1970 Census of Population and Housing can be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

**Standard metropolitan statistical areas.**—The Bureau of the Census recognizes approximately 250 standard metropolitan statistical areas (SMSA's) in the 1970 census. These include the 231 SMSA's (including three in Puerto Rico) as defined and named in the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas: 1967*, U.S. Government Printing Office, Washington, D.C. 20402. Also included are two SMSA's as defined by the Bureau of the Budget in January 1968. In addition, a number of SMSA's are being defined on the basis of the results from the 1970 census.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. For a complete description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

**Places.**—Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Unincorporated places are identified with the letter "U."

**Towns.**—In this series of reports, data for towns of 10,000 inhabitants or more are shown in the reports for the New England States. In these States, towns are the primary political subdivision of the county, unlike most other States where towns are generally incorporated places.

**Race.**—The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. Rather it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who are in doubt as to their classification, the race of the person's father is used. Persons of Mexican or Puerto Rican birth or ancestry who do not identify themselves as of a race other than white (e.g., American Indian, Negro, etc.), are classified as white. In the 3-category grouping shown in this report, the "other" category consists of all races except white or Negro, i.e., American Indian, Japanese, Chinese, Filipino, Korean, Eskimo, etc.

**Age.**—The age classification is based on the age of the person in completed years as of April 1, 1970.

**Households and group quarters.**—All persons are classified as living in either a household or group quarters.

A household consists of all the persons who occupy a housing unit. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which quarters have either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants. A household may, therefore, consist of a single family, one person living alone, two or more families living together, or any other group of related or nonrelated persons who share living arrangements (except as described in the next paragraph on group quarters).

Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons.

Persons in group quarters are subdivided here into "inmate of institution" and "other." The former are persons for whom care or custody is provided in such places as homes and schools for the mentally or physically handicapped, places providing long-term medical care for persons with mental disorders or chronic diseases, homes for dependent children, prisons, etc. Staff members living in group quarters in such places, as well as persons in all the other types of group quarters, are classified as "other."

**Relationship to head of household.**—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. Two types of head of household are recognized here—the head of a family and a primary individual. A family head is a person living with one or more relatives (persons related to him by blood, marriage, or adoption). A primary individual is a household head living alone or with nonrelatives only.

In this report, all household members other than the head are shown in one of the following three categories: (1) "wife of head"—a woman married (either by formal or common law marriage) to the household head; (2) "other relative of head"—all persons related to the head by blood, marriage, or adoption (excluding wife of head); or (3) "not related to head"—all persons not related to the head by blood, marriage, or adoption.

**Symbols.**—A dash "—" represents zero. The symbol "U" means that the place is unincorporated. Three dots "..." indicate that the data are being withheld to avoid disclosure of information for individuals.

**TENNESSEE**

advance report

## General Population Characteristics

*(This series consists of 52 reports—number 1 for the United States and numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than order of publication.)*

This report presents 1970 census statistics on the basic demographic characteristics of the inhabitants of the State. Data on age, sex, race, and relationship to head of household are shown for the State, each standard metropolitan statistical area, each place of 10,000 inhabitants or more, and each county or comparable area.

The data presented here are being issued in advance of their publication in Final Report Series PC(1)-B, which will provide additional information on the population characteristics of the inhabitants of the State. The final report for this State will be published in about 2 months.

Statistics on selected housing characteristics for the areas shown in this report are currently being issued in Advance Report Series HC(V1). An outline of the publication program for the 1970 Census of Population and Housing can be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

**Standard metropolitan statistical areas.**—The Bureau of the Census recognizes approximately 250 standard metropolitan statistical areas (SMSA's) in the 1970 census. These include the 231 SMSA's (including three in Puerto Rico) as defined and named in the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas: 1967*, U.S. Government Printing Office, Washington, D.C. 20402. Also included are two SMSA's as defined by the Bureau of the Budget in January 1968. In addition, a number of SMSA's are being defined on the basis of the results from the 1970 census.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. For a complete description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

**Places.**—Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Unincorporated places are identified with the letter "U."

**Towns.**—In this series of reports, data for towns of 10,000 inhabitants or more are shown in the reports for the New England States. In these States, towns are the primary political subdivision of the county, unlike most other States where towns are generally incorporated places.

**Race.**—The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. Rather it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who are in doubt as to their classification, the race of the person's father is used. Persons of Mexican or Puerto Rican birth or ancestry who do not identify themselves as of a race other than white (e.g., American Indian, Negro, etc.), are classified as white. In the 3-category grouping shown in this report, the "other" category consists of all races except white or Negro, i.e., American Indian, Japanese, Chinese, Filipino, Korean, Eskimo, etc.

**Age.**—The age classification is based on the age of the person in completed years as of April 1, 1970.

**Households and group quarters.**—All persons are classified as living in either a household or group quarters.

A household consists of all the persons who occupy a housing unit. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which quarters have either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants. A household may, therefore, consist of a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except as described in the next paragraph on group quarters).

Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons.

Persons in group quarters are subdivided here into "inmate of institution" and "other." The former are persons for whom care or custody is provided in such places as homes and schools for the mentally or physically handicapped, places providing long-term medical care for persons with mental disorders or chronic diseases, homes for dependent children, prisons, etc. Staff members living in group quarters in such places, as well as persons in all the other types of group quarters, are classified as "other."

**Relationship to head of household.**—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. Two types of head of household are recognized here—the head of a family and a primary individual. A family head is a person living with one or more relatives (persons related to him by blood, marriage, or adoption). A primary individual is a household head living alone or with nonrelatives only.

In this report, all household members other than the head are shown in one of the following three categories: (1) "wife of head"—a woman married (either by formal or common law marriage) to the household head; (2) "other relative of head"—all persons related to the head by blood, marriage, or adoption (excluding wife of head); or (3) "not related to head"—all persons not related to the head by blood, marriage, or adoption.

**Symbols.**—A dash "—" represents zero. The symbol "U" means that the place is unincorporated. Three dots "..." indicate that the data are being withheld to avoid disclosure of information for individuals.

#### CORRECTION NOTE

The corrected 1970 population count for the State is 3,924,164. The detailed distributions shown in this report have not been revised to reflect this correction because the errors were discovered after the tabulations were made. Further information will be provided in the PC(1)-A final report for this State.

Chattanooga, Tenn.-Ga. SMSA—Data shown in this report relate only to the portion of this SMSA in Tennessee; the data for the portion of this SMSA in Georgia appear in advance report PC(V2)-12 for Georgia.

Memphis, Tenn.-Ark. SMSA—Data shown in this report relate only to the portion of this SMSA in Tennessee; the data for the portion of this SMSA in Arkansas appear in advance report PC(V2)-5 for Arkansas.

LIBRARY

## General Population Characteristics

*(This series consists of 52 reports—number 1 for the United States and numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than order of publication.)*

This report presents 1970 census statistics on the basic demographic characteristics of the inhabitants of the State. Data on age, sex, race, and relationship to head of household are shown for the State, each standard metropolitan statistical area, each place of 10,000 inhabitants or more, and each county or comparable area.

The data presented here are being issued in advance of their publication in Final Report Series PC(1)-B, which will provide additional information on the population characteristics of the inhabitants of the State. The final report for this State will be published in about 2 months.

Statistics on selected housing characteristics for the areas shown in this report are currently being issued in Advance Report Series HC(V1). An outline of the publication program for the 1970 Census of Population and Housing can be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

**Standard metropolitan statistical areas.**—The Bureau of the Census recognizes approximately 250 standard metropolitan statistical areas (SMSA's) in the 1970 census. These include the 231 SMSA's (including three in Puerto Rico) as defined and named in the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas: 1967*, U.S. Government Printing Office, Washington, D.C. 20402. Also included are two SMSA's as defined by the Bureau of the Budget in January 1968. In addition, a number of SMSA's are being defined on the basis of the results from the 1970 census.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. For a complete description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

**Places.**—Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Unincorporated places are identified with the letter "U."

**Towns.**—In this series of reports, data for towns of 10,000 inhabitants or more are shown in the reports for the New England States. In these States, towns are the primary political subdivision of the county, unlike most other States where towns are generally incorporated places.

**Race.**—The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. Rather it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who are in doubt as to their classification, the race of the person's father is used. Persons of Mexican or Puerto Rican birth or ancestry who do not identify themselves as of a race other than white (e.g., American Indian, Negro, etc.), are classified as white. In the 3-category grouping shown in this report, the "other" category consists of all races except white or Negro, i.e., American Indian, Japanese, Chinese, Filipino, Korean, Eskimo, etc.

**Age.**—The age classification is based on the age of the person in completed years as of April 1, 1970.

**Households and group quarters.**—All persons are classified as living in either a household or group quarters.

A household consists of all the persons who occupy a housing unit. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which quarters have either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants. A household may, therefore, consist of a single family, one person living alone, two or more families living together, or any other group of related or nonrelated persons who share living arrangements (except as described in the next paragraph on group quarters).

Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons.

Persons in group quarters are subdivided here into "inmate of institution" and "other." The former are persons for whom care or custody is provided in such places as homes and schools for the mentally or physically handicapped, places providing long-term medical care for persons with mental disorders or chronic diseases, homes for dependent children, prisons, etc. Staff members living in group quarters in such places, as well as persons in all the other types of group quarters, are classified as "other."

**Relationship to head of household.**—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. Two types of head of household are recognized here—the head of a family and a primary individual. A family head is a person living with one or more relatives (persons related to him by blood, marriage, or adoption). A primary individual is a household head living alone or with nonrelatives only.

In this report, all household members other than the head are shown in one of the following three categories: (1) "wife of head"—a woman married (either by formal or common law marriage) to the household head; (2) "other relative of head"—all persons related to the head by blood, marriage, or adoption (excluding wife of head); or (3) "not related to head"—all persons not related to the head by blood, marriage, or adoption.

**Symbols.**—A dash "—" represents zero. The symbol "U" means that the place is unincorporated. Three dots "..." indicate that the data are being withheld to avoid disclosure of information for individuals.

Texarkana, Tex.-Ark. SMSA—Data shown in this report relate only to the portion of this SMSA in Texas; the data for the portion of this SMSA in Arkansas appear in advance report PC(V2)-5 for Arkansas.

# 1970 CENSUS OF POPULATION

January 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

JAN 25 1971  
BUREAU OF THE CENSUS

PC(V2)-46

**UTAH**

advance report

## General Population Characteristics

*(This series consists of 52 reports—number 1 for the United States and numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than order of publication.)*

This report presents 1970 census statistics on the basic demographic characteristics of the inhabitants of the State. Data on age, sex, race, and relationship to head of household are shown for the State, each standard metropolitan statistical area, each place of 10,000 inhabitants or more, and each county or comparable area.

The data presented here are being issued in advance of their publication in Final Report Series PC(1)-B, which will provide additional information on the population characteristics of the inhabitants of the State. The final report for this State will be published in about 2 months.

Statistics on selected housing characteristics for the areas shown in this report are currently being issued in Advance Report Series HC(V1). An outline of the publication program for the 1970 Census of Population and Housing can be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

**Standard metropolitan statistical areas.**—The Bureau of the Census recognizes approximately 250 standard metropolitan statistical areas (SMSA's) in the 1970 census. These include the 231 SMSA's (including three in Puerto Rico) as defined and named in the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas: 1967*, U.S. Government Printing Office, Washington, D.C. 20402. Also included are two SMSA's as defined by the Bureau of the Budget in January 1968. In addition, a number of SMSA's are being defined on the basis of the results from the 1970 census.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. For a complete description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

**Places.**—Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Unincorporated places are identified with the letter "U."

**Towns.**—In this series of reports, data for towns of 10,000 inhabitants or more are shown in the reports for the New England States. In these States, towns are the primary political subdivision of the county, unlike most other States where towns are generally incorporated places.

**Race.**—The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. Rather it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who are in doubt as to their classification, the race of the person's father is used. Persons of Mexican or Puerto Rican birth or ancestry who do not identify themselves as of a race other than white (e.g., American Indian, Negro, etc.), are classified as white. In the 3-category grouping shown in this report, the "other" category consists of all races except white or Negro, i.e., American Indian, Japanese, Chinese, Filipino, Korean, Eskimo, etc.

**Age.**—The age classification is based on the age of the person in completed years as of April 1, 1970.

**Households and group quarters.**—All persons are classified as living in either a household or group quarters.

A household consists of all the persons who occupy a housing unit. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which quarters have either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants. A household may, therefore, consist of a single family, one person living alone, two or more families living together, or any other group of related or nonrelated persons who share living arrangements (except as described in the next paragraph on group quarters).

Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons.

Persons in group quarters are subdivided here into "inmate of institution" and "other." The former are persons for whom care or custody is provided in such places as homes and schools for the mentally or physically handicapped, places providing long-term medical care for persons with mental disorders or chronic diseases, homes for dependent children, prisons, etc. Staff members living in group quarters in such places, as well as persons in all the other types of group quarters, are classified as "other."

**Relationship to head of household.**—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. Two types of head of household are recognized here—the head of a family and a primary individual. A family head is a person living with one or more relatives (persons related to him by blood, marriage, or adoption). A primary individual is a household head living alone or with nonrelatives only.

In this report, all household members other than the head are shown in one of the following three categories: (1) "wife of head"—a woman married (either by formal or common law marriage) to the household head; (2) "other relative of head"—all persons related to the head by blood, marriage, or adoption (excluding wife of head); or (3) "not related to head"—all persons not related to the head by blood, marriage, or adoption.

**Symbols.**—A dash "—" represents zero. The symbol "U" means that the place is unincorporated. Three dots "..." indicate that the data are being withheld to avoid disclosure of information for individuals.

# 1970 CENSUS OF POPULATION

November 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

PC(V2)-47

**VERMONT**

advance report

## General Population Characteristics

*(This series consists of 52 reports—number 1 for the United States and numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than order of publication.)*

This report presents 1970 census statistics on the basic demographic characteristics of the inhabitants of the State. Data on age, sex, race, and relationship to head of household are shown for the State, each standard metropolitan statistical area, each place of 10,000 inhabitants or more, and each county or comparable area.

The data presented here are being issued in advance of their publication in Final Report Series PC(1)-B, which will provide additional information on the population characteristics of the inhabitants of the State. The final report for this State will be published in about 2 months.

Statistics on selected housing characteristics for the areas shown in this report are currently being issued in Advance Report Series HC(V1). An outline of the publication program for the 1970 Census of Population and Housing can be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

**Standard metropolitan statistical areas.**—The Bureau of the Census recognizes approximately 250 standard metropolitan statistical areas (SMSA's) in the 1970 census. These include the 231 SMSA's (including three in Puerto Rico) as defined and named in the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas: 1967*, U.S. Government Printing Office, Washington, D.C. 20402. Also included are two SMSA's as defined by the Bureau of the Budget in January 1968. In addition, a number of SMSA's are being defined on the basis of the results from the 1970 census.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. For a complete description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

**Places.**—Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Unincorporated places are identified with the letter "U."

**Towns.**—In this series of reports, data for towns of 10,000 inhabitants or more are shown in the reports for the New England States. In these States, towns are the primary political subdivision of the county, unlike most other States where towns are generally incorporated places.

**Race.**—The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. Rather it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who are in doubt as to their classification, the race of the person's father is used. Persons of Mexican or Puerto Rican birth or ancestry who do not identify themselves as of a race other than white (e.g., American Indian, Negro, etc.), are classified as white. In the 3-category grouping shown in this report, the "other" category consists of all races except white or Negro, i.e., American Indian, Japanese, Chinese, Filipino, Korean, Eskimo, etc.

**Age.**—The age classification is based on the age of the person in completed years as of April 1, 1970.

**Households and group quarters.**—All persons are classified as living in either a household or group quarters.

A household consists of all the persons who occupy a housing unit. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which quarters have either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants. A household may, therefore, consist of a single family, one person living alone, two or more families living together, or any other group of related or nonrelated persons who share living arrangements (except as described in the next paragraph on group quarters).

Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons.

Persons in group quarters are subdivided here into "inmate of institution" and "other." The former are persons for whom care or custody is provided in such places as homes and schools for the mentally or physically handicapped, places providing long-term medical care for persons with mental disorders or chronic diseases, homes for dependent children, prisons, etc. Staff members living in group quarters in such places, as well as persons in all the other types of group quarters, are classified as "other."

**Relationship to head of household.**—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. Two types of head of household are recognized here—the head of a family and a primary individual. A family head is a person living with one or more relatives (persons related to him by blood, marriage, or adoption). A primary individual is a household head living alone or with nonrelatives only.

In this report, all household members other than the head are shown in one of the following three categories: (1) "wife of head"—a woman married (either by formal or common law marriage) to the household head; (2) "other relative of head"—all persons related to the head by blood, marriage, or adoption (excluding wife of head); or (3) "not related to head"—all persons not related to the head by blood, marriage, or adoption.

**Symbols.**—A dash "—" represents zero. The symbol "U" means that the place is unincorporated. Three dots "... " indicate that the data are being withheld to avoid disclosure of information for individuals.

# 1970 CENSUS OF POPULATION

February 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

PC(V2)-48

**VIRGINIA**

advance report

## General Population Characteristics

*(This series consists of 52 reports—number 1 for the United States and numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than order of publication.)*

This report presents 1970 census statistics on the basic demographic characteristics of the inhabitants of the State. Data on age, sex, race, and relationship to head of household are shown for the State, each standard metropolitan statistical area, each place of 10,000 inhabitants or more, and each county or comparable area.

The data presented here are being issued in advance of their publication in Final Report Series PC(1)-B, which will provide additional information on the population characteristics of the inhabitants of the State. The final report for this State will be published in about 2 months.

Statistics on selected housing characteristics for the areas shown in this report are currently being issued in Advance Report Series HC(V1). An outline of the publication program for the 1970 Census of Population and Housing can be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

**Standard metropolitan statistical areas.**—The Bureau of the Census recognizes approximately 250 standard metropolitan statistical areas (SMSA's) in the 1970 census. These include the 231 SMSA's (including three in Puerto Rico) as defined and named in the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas: 1967*, U.S. Government Printing Office, Washington, D.C. 20402. Also included are two SMSA's as defined by the Bureau of the Budget in January 1968. In addition, a number of SMSA's are being defined on the basis of the results from the 1970 census.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. For a complete description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

**Places.**—Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Unincorporated places are identified with the letter "U."

**Towns.**—In this series of reports, data for towns of 10,000 inhabitants or more are shown in the reports for the New England States. In these States, towns are the primary political subdivision of the county, unlike most other States where towns are generally incorporated places.

**Race.**—The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. Rather it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who are in doubt as to their classification, the race of the person's father is used. Persons of Mexican or Puerto Rican birth or ancestry who do not identify themselves as of a race other than white (e.g., American Indian, Negro, etc.), are classified as white. In the 3-category grouping shown in this report, the "other" category consists of all races except white or Negro, i.e., American Indian, Japanese, Chinese, Filipino, Korean, Eskimo, etc.

**Age.**—The age classification is based on the age of the person in completed years as of April 1, 1970.

**Households and group quarters.**—All persons are classified as living in either a household or group quarters.

A household consists of all the persons who occupy a housing unit. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which quarters have either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants. A household may, therefore, consist of a single family, one person living alone, two or more families living together, or any other group of related or nonrelated persons who share living arrangements (except as described in the next paragraph on group quarters).

Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons.

Persons in group quarters are subdivided here into "inmate of institution" and "other." The former are persons for whom care or custody is provided in such places as homes and schools for the mentally or physically handicapped, places providing long-term medical care for persons with mental disorders or chronic diseases, homes for dependent children, prisons, etc. Staff members living in group quarters in such places, as well as persons in all the other types of group quarters, are classified as "other."

**Relationship to head of household.**—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. Two types of head of household are recognized here—the head of a family and a primary individual. A family head is a person living with one or more relatives (persons related to him by blood, marriage, or adoption). A primary individual is a household head living alone or with nonrelatives only.

In this report, all household members other than the head are shown in one of the following three categories: (1) "wife of head"—a woman married (either by formal or common law marriage) to the household head; (2) "other relative of head"—all persons related to the head by blood, marriage, or adoption (excluding wife of head); or (3) "not related to head"—all persons not related to the head by blood, marriage, or adoption.

**Symbols.**—A dash "—" represents zero. The symbol "U" means that the place is unincorporated. Three dots "..." indicate that the data are being withheld to avoid disclosure of information for individuals.

Washington, D.C.-Md.-Va. SMSA—Data shown in this report relate only to the portion of this SMSA in Virginia; the data for the portions of this SMSA in the District of Columbia and in Maryland appear in advance reports PC(V2)-10 for the District of Columbia and PC(V2)-22 for Maryland, respectively.
