

No Waterworks for Hannaford

Hannaford Enterprise: The Village Council at a recent meeting voted to table the resolution for a water and sewer system which has been up for consideration during the early summer. Estimates furnished by the Dakota Engineering & Construction Co. of Valley City show that the water and sewer system for Hannaford would at this time cost about \$80,000.

This seems a large expenditure for a town of this size, but there are many who think it would have been money well spent when the great improvement it would be for the town is considered.

While this matter is dropped for the present it is to be hoped, however, that it will soon be taken up again and the plans materialized.
