
Want 24-Hour Service

McHenry Tribune: There is a move on foot to install a sufficient electric equipment to have 24-hour service in McHenry and a petition asking the council to put the proposition to the people to vote on it is being circulated and there has been no opposition whatever up until this writing and a goodly number have signed the petition, so it seems that all are in favor of the proposition.

It is a fact that there will have to be some move made sooner or later as the present plant is overloaded at times and that it is not economy when dealing with a gas or kerosene engine. It will necessitate the installation of another unit to take care of the load, and many have expressed their intention to install motors in case there is 24-hour service established. The voice of the people is being taken and there should be no trouble in putting the proposition over.
