

# Large Unit at Light Plant Out of Commission

The large unit at the electric light plant has been out of commission for the past week, due to the burning out of the bearings on the generator.

This is the second time within a few weeks that this same trouble has occurred, and from all indications some one with malicious intent has perpetrated the deeds. The first time a piece of tin was placed into the machinery, but was discovered before any great damage was done. A few days later when the unit was again put in operation the second offense was committed, this time emery dust being used, and it has been necessary to send for extra parts to repair the damage.

Electrician Solee is in a quandary as to the motive for these acts. Whether it is Mr. Solee or the village at whom these attacks are directed cannot be determined, but if the culprit who did the job can be found, there is no question but what he will be given ample time to reflect over his misdeeds.
