

COOPERSTOWN COMPANY INSTALLS NEW ENGINE

Sentinel-Courier: Proprietor C. S. Christianson of the Cooperstown Electric Light Co. is having troubles of his own this week. Yet they are troubles that delight him to a certain degree, knowing that the present trouble is going to avoid the usual lot of trouble in the future.

A new and powerful engine is being added to the power equipment of the local plant. Some idea of the size of the engine and the magnitude of the task of getting it in place and together can be gained by knowing that two flat cars were required in the shipment of it from the cities. Cooperstown people are rather enjoying trips to the plant to look at this great new piece of machinery.

Mr. Christianson is busily engaged in getting the new machine in order. An addition must be built to the present power station to accommodate this additional machine, which will be the third engine at the station supplying light and power for the many users in the city.

Much difficulty has been experienced during the last several months. The demand for current was at times too heavy for the power available to supply it, the company enjoying a steadily increasing patronage. However, there will be no end of available service when the third engine is put to work. Cooperstown will then have, Mr. Christianson feels, all the power it will require for years to come. The improvement will be one as greatly appreciated by the public as it will be enjoyed by the proprietor of the plant.
