

Fire Alarm Sounded.

Last Tuesday forenoon about 11:30 fire was discovered in the basement of the F. N. Gilmore residence in this city, which was caused by the chimney burning out, and the clean-out flue, situated just under the floor joists, becoming so hot that it set fire to the timbers. Luckily the fire was discovered before it had gained any great headway, as the fire started in a very difficult place for the fire-fighters to get at. The different companies lost no time and a record breaking run was made. It was not necessary to turn on the water, however, for the hook and ladder boys had the fire under control before the water could get there.
