

## Work Will Begin.

Mr. Ball, of the company who are to put in the electric lighting plant here, was in town over Sunday and on Monday informed The Sentinel that they would begin work on their plant here in two or three weeks. They are at present negotiating with Crane & Johnson for a site for the plant next to their lumber yard adjoining the track.

A 150 horse-power engine and a dynamo large enough to operate 1800 16-candle-power lamps will be put in, all modern machines.
