

The city council held a special session last Monday evening during which time the matter of fire protection was canvassed. As a means of temporary relief a cistern is to be put in in the east end of town and the one at the farmers' elevator fixed up and put in proper condition. The council will also purchase more hose. This is a little help but it is not enough. The present engine is not safe to gamble on, having seen ~~thirteen~~ thirteen years of hard service. The city needs more engine and a bigger water supply. How shall we get it?
