

The new gasoline fire engine arrived last Friday and Expert Gibson of the Waterous company was present to turn the same over to the city after a tryout. Friday afternoon the firemen got out and run out a thousand feet of hose and the engine was given a good test. It is a 60-65 horse power engine and seems to have all kinds of power and we feel sure our little city is now in good shape to fight fire. The city council held a special meeting Saturday evening and formally accepted the fire fighter for the city. The steam engine was put in good shape by Expert Gibson and his assistant while they were here and we are equipped with two engines now, both of them capable of handling a large conflagration.
