
Our Public Schools.

The public schools of Hope have advanced within the past year very rapidly, and now stand in the front rank with the best of schools in the state, and with the addition of another teacher lately will be outstripped in merit or work by none, in this nor any other state. The force now consists of three teachers, allowing thorough work throughout the entire course, which extends to and includes the first two years of high school. They are now using the latest and best text books, and about the first of January will add a manual training department. Scholars can commence in any high school in the state where they left off their studies here, if desiring so to do. Should the increase in number of scholars justify it, our schools will soon have the full high school course. Youths of the county would do well to attend our schools instead of going elsewhere, at a much greater expense. If any should desire information regarding the course of study which they may take, they may secure the desired information by addressing Prof. L. E. Marsh, Principal, or John J. Wamberg, chairman, of the township board of education.
