

Four members of the Kasper family south of town are reported to be dangerously ill from typhoid fever. John Kasper Jr. is in serious condition while John Kasper Sr., his son Louis and youngest daughter Mary have passed the critical stage of the disease and complete recovery is only a question of time. No direct cause of the disease has so far been discovered, the drinking water having been analyzed and found free from infection and the only conclusion reached is that the infectious germs were contained in some of the food eaten in the cook car of the threshing crew. Dr. Caldwell, of Wimbledon, is in attendance.
