

---

X Dave Wilcox, whom many of our readers well know, has had a very serious operation performed by Drs. Kerr and Platou. Last Friday they opened the abdomen and removed a portion of the bowel, called the vermiform appendix. A lemon seed had lodged in it and caused severe inflammation. We hear that he is so far doing as well as can be. He is with Ed Ladbury who is giving him all the attention for which his kind heart is noted. The above operation is similar to the one performed on Henry Retzlaff by Dr. Thams. Later,—We understand he is in a very critical condition.
