
MisInformed.

Diphtheria is raging at Hope. Let us hope that it will not reach here. Look to the sanitary condition of your homes as this is a terrible disease to get into a community. An ounce of preventative, etc.—Wheatland Eagle.

Diphtheria is NOT raging in Hope, nor has there been a single case in this place. In the extreme northwestern part of Steele county it has been raging, and in a very bad form, and numerous deaths has been the result of its ravages. Every precaution was taken by the attending physicians, Dr. Philip, of this place, and Dr. Carr, of Northwood, and thanks to their precautions the disease has been checked and has not been allowed to spread outside the neighborhood where it first broke out. Will the Eagle please correct?
